Preface

This user guide introduces the Qualys Scanner Appliance. The Scanner Appliance offers Qualys users the ability to extend their use of the service to assess the security of internal network systems, devices and web applications.

Note: Your use of the Qualys Scanner Appliance is subject to the terms and conditions of the Qualys Service User Agreement.

About Qualys

Qualys, Inc. (NASDAQ: QLYS) is a pioneer and leading provider of cloud security and compliance solutions with over 7,700 customers in more than 100 countries, including a majority of each of the Forbes Global 100 and Fortune 100. The Qualys Cloud Platform and integrated suite of solutions help organizations simplify security operations and lower the cost of compliance by delivering critical security intelligence on demand and automating the full spectrum of auditing, compliance and protection for IT systems and web applications. Founded in 1999, Qualys has established strategic partnerships with leading managed service providers and consulting organizations including Accenture, Accuvant, BT, Cognizant Technology Solutions, Dell SecureWorks, Fujitsu, HCL Comnet, InfoSys, NTT, Tata Communications, Verizon and Wipro. The company is also a founding member of the [Cloud Security Alliance \(CSA\)](#).

For more information, please visit www.qualys.com.

Contact Qualys Support

Qualys is committed to providing you with the most thorough support. Through online documentation, telephone help, and direct email support, Qualys ensures that your questions will be answered in the fastest time possible. We support you 7 days a week, 24 hours a day. Access support information at www.qualys.com/support/.

CHAPTER 1

Get Started

Welcome to the Qualys Scanner Appliance, an option with the Qualys Cloud Platform from Qualys, Inc. With the Qualys Scanner Appliance, you can assess internal network devices, systems and web applications. The Scanner Appliance is a robust, scalable solution for scanning networks of all sizes including large distributed networks.

It's easy to set up a Scanner Appliance within your network. Let's get started!

[Before you begin](#)

[Best Practices for internal scanning](#)

[Quick Start](#)

Interested in Virtual Appliances?

The Qualys Virtual Scanner Appliance is packaged and qualified for deployment on a variety of virtualization and cloud platforms. Please contact your TAM or Qualys Support if you're interested in adding Virtual Appliances to your license.

Desktop/Laptop - VMware Workstation, Player, Fusion, Oracle VirtualBox

Client/Server - VMware vCenter/vSphere, Citrix XenServer, Microsoft Hyper-V

Cloud - Amazon EC2 - Classic, Amazon EC2 - VPC.

Before you begin

Check package accessories

Your starter kit package should contain these components. If any components are missing or damaged, please contact Qualys Support.

Qualys Scanner Appliance User Guide
AC power cord
CAT6 cable
Rack screws (quantity 4) - 10-32 x 3/4", Phillips, black matte, with washer
USB-to-RS232 converter cable

Network requirements / configuration

Bandwidth	Minimum recommended bandwidth connection of 1.5 megabits per second (Mbps) to the Qualys Cloud Platform.
Outbound HTTPS Access	The local network must be configured to allow outbound HTTPS (port 443) access to the Internet, so that the Scanner Appliance can communicate with the Qualys Cloud Platform.
Appliance Access to Qualys Cloud Platform	<p>The Scanner Appliance must be able to reach certain infrastructure located at the Qualys Cloud Platform where your Qualys account is located.</p> <p>Tip - Log into your account and go to Help> Account Info to see the Qualys Cloud Platform URLs.</p>
Appliance Access to Target Host IPs	The IP addresses for the hosts to be scanned must be accessible to the Scanner Appliance. The Appliance must be able to resolve external DNS for the hostnames to be scanned.
LAN Interface is Default	The LAN interface services both scanning traffic and management traffic to the Qualys Cloud Platform, unless split network configuration is defined for the Appliance. See Split Network Configuration .
VLAN Support	VLAN configuration options: 1) If you have connected the LAN interface to a 802.1q trunked port and need your Scanner Appliance to use VLAN tags on the LAN default network, enter the VLAN tag number using the Appliance console. 2) For any Appliance, you can choose option 1) and also configure more VLANs (to be used for scanning) using the Qualys user interface.

DHCP or Static IP	By default the Scanner Appliance is pre-configured with DHCP. If configured with a static IP address, be sure you have the IP address, netmask, default gateway, primary DNS and WINS server (if appropriate).
Proxy Support	The Scanner Appliance includes Proxy support with or without authentication — Basic or NTLM. The Proxy server must be assigned a static IP address and must allow transparent SSL tunneling. Proxy-level termination (as implemented in SSL bridging, for example) is not supported.
WINS Support	If your network is running Windows Internet Naming Service (WINS), the Scanner Appliance needs to use it for host name resolution during scanning. For an Appliance configured with DHCP, please be sure your WINS server IPs (primary and secondary) are added to your DHCP subnet configuration using “option netbios-name-servers WINS1, WINS2;”. For an Appliance with a static IP address, the WINS servers are defined with the static IP settings using the Appliance console.

Best Practices for internal scanning

Here are our best practices related to internal scanning.

Avoid scanning through a firewall from the inside out

Problems can arise when scan traffic is routed through the firewall from the inside out, i.e. when the scanner Appliance is sitting in the protected network area and scans a target which is located on the other side of the firewall. We recommend placing scanner Appliances in your network topology in a way that scanning and mapping through a firewall from the inside out is avoided if possible.

From the Qualys Community

[Scanning through a firewall](#)

Check network access to scanners

Go to Help > About in the application. The Scanner Appliances section lists URLs at the SOC (Security Operations Center) for your account/location. Your Scanner Appliances must be able to contact these URLs on port 443. For Private Cloud Platform, the URLs displayed are appropriate to your local on-site SOC.

From the Qualys Community

[How to check network access to scanners](#)

Consult your network group for scanner placement

It's highly recommended that you work with your network group to determine where to place Scanner Appliances in an enterprise network environment. Some things to consider: place Scanner Appliances as close to target machines as possible, and make sure to monitor and identify any bandwidth restricted segments or weak points in the network infrastructure. Scanning through layer 3 devices (such as routers, firewalls and load balancers) could result in degraded performance so you may consider using our VLAN tagging feature (VLAN trunking) to circumvent layer 3 devices to avoid potential performance issues.

Quick Start

Once you complete the Quick Start you're ready to start scanning! It takes just a couple of minutes. It's important that you complete the steps in the order shown.

Step 1 - Connect the Scanner Appliance to the Network

Qualys strongly recommends the Scanner Appliance be plugged into a Managed Power Supply. On the rare occasion where the Scanner Appliance may need to be rebooted, utilizing the MPS will allow for remote rebooting in unmanned or high security areas.

Set Up Network Connection

The Scanner Appliance connects like any other computer to a switch on your network.

To set up the network connection, follow these steps:

- Connect one end of an Ethernet cable to the Ethernet LAN port on the Scanner Appliance (back panel).
- Connect the other end of the Ethernet cable to a 10BASE-T or 100BASE-TX or 1 Gigabit switch on your network.

Remote Console Interface Set Up (optional)

The Remote Console interface supports remote configuration and management of the Scanner Appliance using a VT100 terminal, such as Windows HyperTerminal.

Figure 1-1. Set up for Remote Console Interface

A USB-to-RS232 converter cable allows you to connect to their terminal server via network cable. Qualys recommends the following USB-to-RS232 converter cable:

IOGEAR USB-Serial Model GUC232A

Full specifications: <http://www.iogear.com/product/GUC232A/>

Keystroke File Not Supported: The Remote Console interface is not intended for uploading the whole scanner configuration by means of a pre-defined "keystroke file." Uploading such a file will result in lost characters and incorrect configuration.

To set up the Remote Console interface, follow these steps:

- 1 Be sure the terminal server is up and running. Also check the terminal server settings. The following settings are required. **Note - Stop Bits must be set to 2.**

Port Setting	Value
Bits per second (Baud rate)	9600
Data Bits	8
Parity	None
Stop Bits	2
Flow Control	None
Terminal Emulation	VT100

- 2 Connect one end of the USB-to-RS232 converter cable to a USB port on the Scanner Appliance (back panel).
- 3 Connect the other end of the USB-to-RS232 converter cable to your terminal server via network cable.
- 4 Connect the Scanner Appliance (see [Step 2 - Power On the Scanner Appliance](#))

Note: In the case where the Scanner Appliance is already powered on, you must reboot the Scanner Appliance before taking the next step and making any configurations. To reboot, press the Down arrow on the LCD interface until the **SYSTEM REBOOT** message appears and then press ENTER. Please make sure that the Scanner Appliance has fully rebooted (this takes up to 3 minutes).
- 5 Press the ENTER key on the VT100 terminal's keyboard to display the Remote Console interface. You will notice the MAC address for the Scanner Appliance appears.

Step 2 - Power On the Scanner Appliance

To power on the Scanner Appliance, follow these steps:

- 1 Connect the AC power cord into the Power Supply Socket.

Note: Qualys strongly recommends the Scanner Appliance be plugged into a Managed Power Supply. On the rare occasion where the Scanner Appliance may need to be rebooted, utilizing the MPS will allow for remote rebooting in unmanned or high security areas.

- 2 Press the power button on the back panel. Be sure that the power button has a green backlight.
- 3 **Welcome to Qualys** appears in the Scanner Appliance interface followed by other informational messages during the boot process which takes approximately two minutes. These messages appear in the order shown:

```
Welcome to Qualys
Qualys Scanner is starting up...
Filesystem check in progress...
Qualys Scanner is coming up...
```

- 4 Once the Scanner Appliance makes a successful connection to the Qualys Cloud Platform you'll see the activation code message.

ACTIVATION CODE — The activation code for the Scanner Appliance is displayed. A unique code is assigned to each Appliance. Make a note of the activation code and then go to enter the activation code.

You might see a network error message instead. This will be reported if the Scanner Appliance did not make a successful connection to the Qualys Cloud Platform using its current network settings. The network error must be resolved before you go to Step 3. Need help? See [Troubleshooting](#).

Tip - If you've set up the Remote Console, it may be necessary to press the ENTER key on the VT100 terminal's keyboard to display the Remote Console interface.

Complete the Network Configuration

Enable the network configurations for the Scanner Appliance, as appropriate, in the order listed. One or more configurations may be required. Any network error must be resolved before going to Step 3. Refer to [Troubleshooting](#) for help with resolving any errors.

Configuration Options	For information ...
A Static IP Address	See “Configure Static IP Address” on page 32
B Proxy Support	See “Proxy Configuration” on page 37
C Split Network Configuration using DHCP	See “Enable DHCP on the WAN Interface” on page 43 and “Enable DHCP on the WAN Interface” on page 43
D Split Network Configuration using a Static IP Address	See “Enable DHCP on the WAN Interface” on page 43 and “Enable Static IP on the WAN Interface” on page 43

Use the options chart below to determine the configurations needed.

	DHCP w/o Proxy	Static IP w/o Proxy	DHCP with Proxy	Static IP with Proxy
Standard Config	no action	A	B	A & B
Split Netw. Config: DHCP on WAN	C	A & C	B & C	A, B, & C
Split Netw. Config: Static IP on WAN	D	A & D	B & D	A, B, & D

The Scanner Appliance supports VLAN interface configuration (802.1Q). For information, see [Configure VLANs and Static Routes](#).

You may see a network error message one or two more times, depending on how many configurations are needed. For example, if the Scanner Appliance is installed on a network with DHCP and a Proxy server, and you want split network configuration with DHCP, you enable options B and C. After you enable option B, you’ll see another network error prompting you to make another configuration.

Step 3 - Activate the Scanner Appliance

You will need a Qualys user account with the role of Manager or Unit Manager. Check to be sure that you have your account information.

- 1 Open a browser and go to the platform URL where your account is located. Please refer to your registration email containing your platform URL and login credentials. A Manager or Unit Manager account is required.
- 2 On the Qualys **LOGIN** page, enter your user name (login) and password, and then click **LOGIN**. You are prompted to review and accept the licensing agreement when you log into your account for the first time. Your Qualys Home page appears upon successful login.
- 3 Select VM from the application picker.
- 4 Go to Scans > Appliances.
- 5 Select New > Scanner Appliance and enter the activation code for the activation code appears in the **ACTIVATION CODE** screen in your Appliance's user interface (LCD and Remote Console). Note: The activation code is displayed only when the Appliance has not been activated yet.
- 6 Unit Manager only) From the Add To menu, select an asset group that you want to add the Scanner Appliance to. This will make the Appliance available to users in your business unit.
- 7 Click Activate. Then the Scanner Appliance attempts to log in to the Qualys Cloud Platform.

Note: It may take a few minutes for the Scanner Appliance activation to occur. If you prefer not to wait, complete the activation manually by restarting the Scanner Appliance. Just press the Down arrow until the **SYSTEM REBOOT** screen appears and then press ENTER. When **REALLY REBOOT SYSTEM?** appears press ENTER.

- 8 The **SCANNER APPLIANCE NAME-IP ADDRESS** message appears after the Scanner Appliance makes a successful login to the Qualys Cloud Platform. Do you see another message instead? See [Troubleshooting](#) and we'll help you with this.

That's all there is to it!

You are ready to start scanning with your Qualys Scanner Appliance! You'll see the Scanner Appliance name and IP address in the interface (LCD or Remote Console), this indicates you have completed the Quick Start, the Scanner Appliance has been added to your subscription.

Tip - Before you launch scans using the Scanner Appliance, we recommend you log into the Qualys user interface and check the Appliance status on the appliances list.

Scanner Appliance Name and IP Address

The Scanner Appliance name and IP address appear as shown below.

The Scanner Appliance name displayed is "is_username", where *username* is your Qualys user name. The name can be changed using the Qualys user interface.

The IP address is available for information purposes only. The Scanner Appliance is remote controlled by the Qualys Cloud Platform, and the Appliance does not allow incoming logins or connections from the network. If split network configuration is enabled, the IP address for the LAN interface is displayed.

The Qualys Cloud Platform indicator for your account appears in the lower right corner.

Proper Shutdown

Just go to the LCD display on the front panel. Press the down arrow until **SYSTEM SHUTDOWN** appears, and then press **ENTER**. When you see **REALLY SHUTDOWN SYSTEM?** press **ENTER**. You'll notice the Scanner Appliance lights and LEDs are turned off. Then you can safely disconnect the power supply.

Don't want to use the LCD interface? No problem, you can press the power button on the back panel instead.

We recommend one more thing

Check your Scanner Appliance status in Qualys. Go to Scans > Appliances and select your Appliance. You'll see details in the preview pane.

The screenshot shows the Qualys Scanner Appliance management interface. At the top, there's a navigation bar with tabs: Scans, Maps, Schedules, Appliances (selected), Option Profiles, Authentication, Search Lists, and Setup. Below the navigation bar is a search bar and a table of appliances. The table has columns: Appliance, ID, LAN IP, LAN IPv6, Polling, Scanner, Signatures, and Last Update. Two appliances are listed: 'scanner2' and 'scanner1'. 'scanner2' is highlighted in yellow. To the right of the table is a 'Preview' pane for 'scanner2'. The preview pane shows the appliance's status as 'Connected', its owner as 'Patrick Slimer (Manager)', and its connection details. Below this, there's a summary section with 'Heartbeat Checks Missed' (0), 'Latest Scanner Version' (6.7.20-1), 'Latest Signature Version' (2.2.245-2), and 'Available Capacity' (82%).

Appliance	ID	LAN IP	LAN IPv6	Polling	Scanner	Signatures	Last Update
scanner2	20222875170839	10.100.14.114	--	180 seconds	6.7.20-1	2.2.245-2	09/28/2012 at 11:04:51 (GMT-0700)
scanner1	20260419934240	10.100.14.130	--	65 seconds	6.7.13-1	2.2.233-1	10/01/2012 at 14:26:57 (GMT-0700)

Preview: scanner2
ID: 20222875170839
Owner: Patrick Slimer (Manager) | Connected on: 10/03/2012 at 11:25:04 (GMT-0700) | Verified on: 10/03/2012 at 11:30:01 (GMT-0700) | Connected

Summary: The appliance is online and its software versions are up to date.

Heartbeat Checks Missed	Latest Scanner Version	Latest Signature Version	Available Capacity
0	6.7.20-1	2.2.245-2	82%

1) tells you your Scanner Appliance is ready. Now you can start internal scans! Next to the status you'll see the busy icon is greyed out until you launch a scan, then it looks like this .

You might also check out:

2) tells you that your Scanner Appliance is a Physical Appliance (means it's a Virtual Appliance).

3) Latest software versions - these are installed automatically as part of the activation.

4) The available capacity will be 100% until you launch a scan. You can come back and check on this at any time.

Scanner Appliance Tour

This section gives you a tour of the Qualys Scanner Appliance, its features, basic operation and configuration options.

[A Quick Look at the Appliance](#)

[Navigating the Appliance UI](#)

[System Reboot and Shutdown](#)

[Configure VLANs and Static Routes](#)

[Configure Static IP Address](#)

[Configure IPv6 Address for Scanning](#)

[Proxy Configuration](#)

[Split Network Configuration](#)

[Reset the Network Configuration](#)

[Changing the Network Configuration](#)

A Quick Look at the Appliance

Front Panel

You'll see **Welcome to Qualys** in the LCD display when you connect the Appliance to the network for the first time. After you've successfully completed the Quick Start steps for your Scanner Appliance, you'll see the Scanner Appliance name and IP address.

Use the keypad to enter information and respond to prompts.

- Left and Right arrow buttons move the cursor to left/right in an entry field.
- Up and Down arrow buttons scroll through menu options, and scroll through characters in an entry field.
- ENTER button, in the center, is used to confirm entries and move to the next screen.

Tell me about the LEDs.

- S1 tells you a Qualys scan is in progress on the Scanner Appliance.
- S2 tells you a software update to the Scanner Appliance is in progress.
- S3 is not used.

Back Panel

The Appliance's back panel includes: the power socket, the Ethernet LAN port, the Ethernet WAN port, and two USB ports.

Power socket - Use to connect the power connector to the Appliance.

Power button - Use to power on the Appliance. A green light indicates the Appliance is turned on.

LAN/WAN ports - Use to connect the Appliance to a hub or switch on your network using a straight through CAT6 twisted pair Ethernet cable. The LAN port is required. The WAN port is only required if you choose the split network configuration option.

USB ports - Connect a USB-to-RS232 converter cable to a USB port if you want to use the optional Remote Console interface (any port may be used).

Appliance UI

The Scanner Appliance has a user interface for configuration and management. You can choose to use the LCD display and keypad on the front panel, or the optional Remote Console interface. Both the LCD display and Remote Console offer the same functionality and share the same menus and navigation (ENTER key and arrows) for a consistent user experience.

The Remote Console interface supports remote configuration and management of the Scanner Appliance using a VT100 terminal, such as Windows HyperTerminal. See [Remote Console Interface Set Up \(optional\)](#).

Navigating the Appliance UI

Main Menu

To access the Scanner Appliance main menu, press ENTER when the Scanner Appliance name and IP address are displayed. The first menu option displayed is **SETUP NETWORK**.

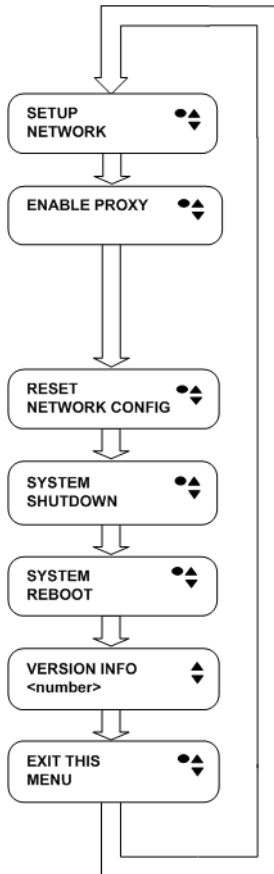

Figure 2-1. Scanner Appliance Main Menu

To move up through the menu options, press the Up arrow. To move down through the menu options, press the Down arrow. To select an option, press ENTER. To exit the main menu, press the down arrow button until the **EXIT THIS MENU** option appears, and then press ENTER.

Navigation Indicators

Each Scanner Appliance screen displays one or more indicators in the top right corner, indicating the navigation options available from the current screen.

LCD Button	Remote Console Key	Description
	ENTER	Confirm a selection. After you press ENTER, another screen appears.
	RIGHT	Move the cursor to the right in an entry field.
	LEFT	Move the cursor to the left in an entry field.
	UP	Used to: — Increase the value in an entry field — Move up through menu options — Cancel a confirmation message
	DOWN	Used to: — Decrease the value in an entry field — Move down through menu options

Note these important guidelines for using buttons: 1) Press one button at a time, 2) Do not hold down an arrow button (except as noted in guideline 3), instead press the arrow multiple times, and 3) When entering a user name or password, you can hold down the Up and Down arrow buttons to scroll through characters quickly.

Entering Information

The Scanner Appliance user interface (LCD and Remote Console) allow users to enter information in the fields provided using arrow keys. The Left and Right arrows move the cursor to the left and right and the Up and Down arrows are used to scroll through characters. Some fields allow certain characters to be entered. The character restrictions are described below.

Up and Down Arrows

Using the LCD user interface use the Up and Down arrows to enter characters in a field. Using the Remote Console interface you have the option to use the Up and Down arrows or to use your keyboard to enter characters.

In numeric entry fields, you press the Up and Down arrows to select a value between 0 and 9. When a numeric entry field is first displayed, a default value appears.

In text entry fields where you enter a user name and password, you press the Up and Down arrows to select a character (numeric, alphabetic, space, underscore or special character). In these fields, you can hold the Up arrow or the Down arrow to scroll through the available characters. When a text entry field is first displayed, the text entry field is blank (filled with spaces).

Scrolling through Characters

The Qualys user fields, **SA LOGIN** and **SA PASSWD**, and the Proxy user fields, **PROXY USER** and **PROXY PASSW**, allow you to select lower case letters, uppercase letters, numbers, space, and underscore. Some fields allow special characters.

Press the Up arrow to scroll through characters in ascending order. Starting from the space character, the characters appear in this order: lowercase letters (a to z), space, numbers (0 to 9), underscore, special characters (for Proxy user name and password only), uppercase letters (A to Z).

Figure 2-2. Scrolling characters in ascending order

Press the Down arrow to scroll through characters in descending order. Starting from the space character, the characters appear in this order: uppercase letters (Z to A), special characters (for Proxy user name and password only), underscore, numbers (9 to 0), space, lowercase letters (z to a).

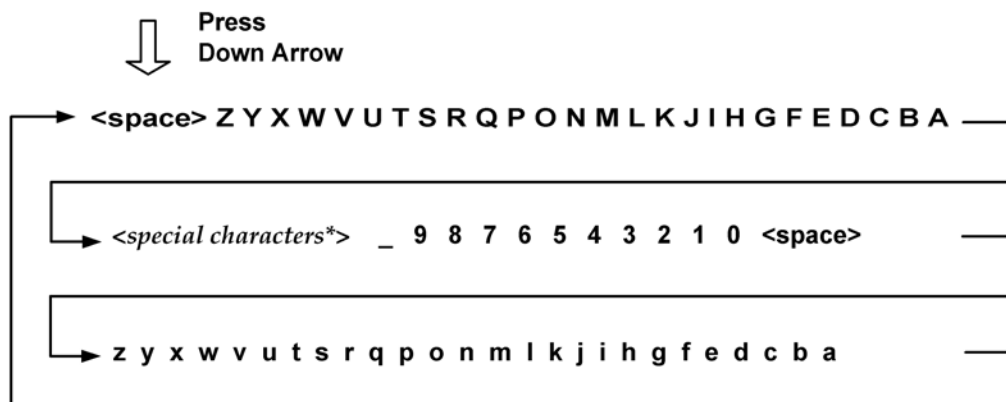

Figure 2-3. Scrolling characters in descending order

Space Character

When a text field entry contains fewer characters than the character positions on the interface screen, you must select the space character for the unused positions, before or after the field entry. Only the characters associated with the field entry and space characters may be included in a text field entry.

Embedded spaces are not permitted in text field entries, except in the Proxy password field.

The space character may be used to remove characters when editing text fields, except the Proxy password. To remove a character in an entry field using the LCD user interface, move the cursor on the character (using the Left and Right arrows), select the space character (using the Up and Down arrows) and then press ENTER. Any space characters entered appear in the interface screen until the next time you revisit the screen.

IP Addresses

Entry fields for IP addresses are pre-filled with values in this format: *nnn.nnn.nnn.nnn*

The IP address format displays values for each character position in all octets. When entering an IP address, you replace the three “n” digits for each octet as appropriate. If an octet has less than three digits, then the octet must include leading zeros. For example, to specify the IP address “194.55.176.2”, you input the IP address as “194.055.176.002”.

Domain Name

The **DOMAIN NAME** field in the static IP address configuration allows you to enter the domain name for the DNS server (for example, mydomain.com). The domain name entry can have a maximum length of 32 characters. These characters are allowed: uppercase letters, numbers, underscore(_), and period (.).

Figure 2-4. Special characters in the Domain Name field

The screen displays 16 characters of the **DOMAIN NAME** field entry and it scrolls left. For example, the first character of the domain name is hidden when the 17th character is entered. As each additional character is entered, the domain name scrolls left.

Tips - The space character may be used to remove characters when editing the domain name entry. There's a shortcut for clearing a domain name entry. Just press the Left arrow and Right arrow at the same time.

Proxy User Name

For the Proxy user name in the **PROXY USER** field you may enter a maximum of 32 characters including lower case letters, upper case letters, numbers, space, and underscore. These special characters can be used: underscore (_), dash (-), backslash (\), period (.), at sign (@).

Figure 2-5. Special characters in the Proxy user field

The screen displays 16 characters of the **PROXY USER** field entry, and it scrolls left. For example, the first character of the Proxy user name is hidden when the 17th character is entered. As each additional character is entered, the Proxy user name scrolls left. The space character may be used to remove characters.

The format of a Proxy user entry is: "domain\user". If there is a backslash in the middle of the entry, the Appliance interprets the string before the backslash as the domain name. No double backslashes (\\) are needed in front of the "domain\user" format.

Proxy Password

The **PROXY PASSW** allows you to enter a maximum of 16 characters including lower case letters, upper case letters, numbers, space, and underscore. Many special characters are allowed. These characters are shown in ascending order in the table below. Using the LCD interface, to scroll through characters 1 to 30, press the Up arrow. To scroll through characters in descending order, press the Down arrow.

Special Characters in the PROXY PASSW field

Order (ascending)	Character	Name	Order (ascending)	Character	Name
1	_	underscore	16	+	plus
2	-	hyphen	17	=	equal
3	\	backslash	18	(parenthesis left
4	/	slash	19)	parenthesis right
5		bar	20	{	brace left
6	~	tilda	21	}	brace right
7	!	exclamation	22	[bracket left
8	?	question	23]	bracket right
9	@	at sign	24	<	less
10	#	number sign	25	>	greater
11	\$	dollar	26	;	semicolon
12	%	percent	27	"	double quote
13	^	asciicircum	28	`	grave
14	&	ampersand	29	,	comma
15	*	asterisk	30	.	period

System Reboot and Shutdown

It is important to follow the proper system shutdown instructions described below. If you do not follow these instructions, file system corruption may occur.

How to reboot the system

- 1 With the Scanner Appliance name and IP address displayed, press ENTER.
- 2 When the **SETUP NETWORK** menu option appears, press the Down arrow to navigate through the menu options.
- 3 When the **SYSTEM REBOOT** menu option appears, press ENTER to select the option.
- 4 When the **REALLY REBOOT SYSTEM?** prompt appears, press ENTER to confirm.

Review the confirmation messages starting with **REBOOTING SYSTEM** message. The **SCANNER APPLIANCE NAME-IP ADDRESS** is displayed after the Scanner Appliance makes a successful connection to the Qualys Cloud Platform. This message indicates the Scanner Appliance is ready for scanning. If another message appears you need to activate the Scanner Appliance or troubleshoot the issue before scanning. See [Troubleshooting](#) for help with resolving any errors.

How to shutdown the system

You can power off the system using the shutdown button or using the Appliance UI.

Using the Appliance UI:

- 1 With the Scanner Appliance name and IP address displayed, press ENTER.
- 2 When the **SETUP NETWORK** menu option appears, press the Down arrow to navigate through the menu options.
- 3 When the **SYSTEM SHUTDOWN** menu option appears, press ENTER.
- 4 When the **REALLY SHUTDOWN SYSTEM?** prompt appears, press ENTER to confirm.
- 5 **Important!** The Scanner Appliance should now power down within 60 seconds. When this message appears: "It's now safe to unplug the box", then you can safely unplug the Scanner Appliance.

What happens a restart?

When you restart the Scanner Appliance, several messages appear during the startup process, as described below:

- 1 When the system is restarted, informational messages appear in the screen during the boot process. These messages appear in the order shown below:

```
Welcome to Qualys
Qualys Scanner is starting up...
Filesystem check in progress...
Qualys Scanner is coming up...
```

- 2 The Appliance attempts to connect to the Qualys Cloud Platform using its configuration. During this phase, these messages appear in the order shown below:

```
CONTACTING QUALYS
Filesystem check in progress...
CONTACTING QUALYS
```

- 3 The **SCANNER APPLIANCE NAME-IP ADDRESS** is displayed after the Scanner Appliance makes a successful connection to the Qualys Cloud Platform. This means your the Scanner Appliance is ready to start scanning. If another message appears you need to take some action before you can start scanning:
 - **ACTIVATION CODE** — The Scanner Appliance needs to be activated. Refer to the [Quick Start](#) for instructions.
 - **Network error** — A network error prevented the Scanner Appliance from making a connection to the Qualys Cloud Platform. This issue must be resolved before scanning. See [Troubleshooting](#) for help with resolving the issue.

Configure VLANs and Static Routes

The Scanner Appliance supports VLAN trunking on the LAN interface for scanning traffic. VLAN trunking on the WAN interface is not supported. One VLAN interface (802.1Q) may be configured using the Scanner Appliance user interface (LCD and Remote Console). Up to 4094 VLANs and static routes can be defined using the Qualys web application.

How it works - The Scanner Appliance adds VLAN tag(s) to all scanning packets following the 802.1Q tagging protocol.

Configure VLAN using the Appliance UI

A VLAN that is defined using the Scanner Appliance UI is saved on the Appliance and can't be edited using the Qualys UI.

Important! After making configuration changes, be sure to complete the entire network configuration so that your Scanner Appliance makes a successful connection to the Qualys Cloud Platform.

Configure VLAN

To configure the Scanner Appliance with a default VLAN interface on the LAN interface, follow these steps:

- 1 Go to the **SETUP NETWORK** menu option and press ENTER to continue.
- 2 Press the Down arrow one time. When the **ENABLE VLAN ON LAN** menu option appears, press ENTER to continue.
- 3 When the prompt **VLAN 0-4094** appears, specify the VLAN ID. The value "0000" appears in the screen by default. Specify the VLAN ID, and then press ENTER to continue.

Change VLAN

A default VLAN that you've added using the Scanner Appliance user interface (LCD and Remote Console) can be changed at any time. To do this, select the **CHANGE VLAN ON LAN** menu option from the **SETUP NETWORK** menu. Then enter another VLAN ID and press ENTER.

Disable VLAN

To disable a default VLAN, select the **CHANGE VLAN ON LAN** menu option from the **SETUP NETWORK** menu. Then enter the VLAN ID "0000" and press ENTER. After the configuration is disabled the **ENABLE DHCP ON LAN** menu option appears on the Scanner Appliance interface.

Configure VLANs / Static Routes using the Qualys UI

Configuring VLANs and static routes is supported using the Qualys UI. Just go to the appliances list (Scans > Appliances) and edit the Appliance settings. The VLANs and static routes you add are saved with your account information on the Qualys Cloud Platform.

Up to 4094 VLANs and static routes can be added to each Scanner Appliance, as long as you are using the latest appliance software distribution.

Don't see these settings? The VLAN trunking feature must be turned on for your account. Please contact Support or your Technical Account Representative if you'd like us to turn it on for you.

Configure Static IP Address

If DHCP is not on your network, you must enable the Scanner Appliance with a static IP address using the **ENABLE STATIC IP ON LAN** menu option. One of these configurations is required.

Entry fields for IP addresses used in the static IP address configuration are pre-filled with three digits for all octets, and you must enter a value for each digit. For example, to specify the IP address “176.34.20.5”, you input the IP address as “176.034.020.005”. See [IP Addresses](#) for details.

Tell me the steps

When enabling a static IP address on the LAN interface, you must enter network configuration settings for the Scanner Appliance so that the Appliance can communicate with the Qualys Cloud Platform. Also, you have the option to enter some network settings for informational purposes.

To enable a static IP address on the LAN interface for the Scanner Appliance, follow these steps:

- 1 Go to the **SETUP NETWORK** menu option and press ENTER to continue.
- 2 Press the Down arrow until the **ENABLE STATIC IP ON LAN** menu option appears. Then press ENTER to continue.
- 3 When the **CFG LAN STATIC NETWORK PARAMS?** prompt appears, press ENTER to continue. Or press the Up arrow to quit this procedure and return to the **SETUP NETWORK** menu option.

Entering parameters

The Scanner Appliance user interface (LCD and Remote Console) allows users to enter information in the fields provided using the arrow keys. Use the Left and Right arrows to move the cursor to the left and right, and use the Up and Down arrows to scroll through characters. With the Remote Console interface, you have the option to enter characters using the VT100 terminal’s keyboard.

- 1 When the **LAN IP ADDR** prompt appears, enter the static IP address, and then press ENTER to continue.
- 2 When the **LAN NETMASK** prompt appears, use the Up and Down arrows to scroll to the desired netmask value. For information about netmask values, see [Tell me about LAN Netmask](#). After selecting a netmask value, press ENTER to continue.
- 3 When the **LAN GATEWAY** prompt appears, enter the gateway IP address, and then press ENTER to continue.

- 4 When the **LAN DNS1** prompt appears, enter the IP address for the primary DNS server, and then press ENTER to continue.
- 5 When the **LAN DNS2** prompt appears, enter the IP address for the secondary DNS server. This entry is optional. Press ENTER to continue.
- 6 Next are three optional network settings, used for informational purposes only. These Appliance settings are not used to access the internal network for scanning or the Qualys Cloud Platform for software updates. To skip these settings, press ENTER three times.
 - When the **LAN WINS1** prompt appears, enter the IP address for the primary WINS server, if any. Press ENTER to continue.
 - When the **LAN WINS2** prompt appears, enter the IP address for the secondary WINS server, if any. Press ENTER to continue.
 - When the **DOMAIN NAME** prompt appears, enter the domain name for the DNS server (for example, mydomain.com). Press ENTER to continue.
- 7 When the **REALLY SET LAN STATIC NETWORK?** prompt appears, press ENTER to continue. Or press the Up arrow to quit this procedure and return to the **SETUP NETWORK** menu option.
- 8 Review the confirmation messages. The Scanner Appliance attempts to make a connection to the Qualys Cloud Platform using the new configuration. Upon success the **SCANNER APPLIANCE NAME-IP ADDRESS** message appears and the static IP address is enabled.

Confirm the configuration

When you see **SCANNER APPLIANCE NAME-IP ADDRESS** this means you are ready to start scanning. This message appears if the Scanner Appliance made a successful connection to the Qualys Cloud Platform using the new configuration.

A network error screen appears if the Scanner Appliance failed to make a connection to the Qualys Cloud Platform. A network error may occur because the static IP parameters you entered are incorrect, or they do not match the static IP configuration on your network. See [Troubleshooting](#) for help with resolving the issue.

Tell me about LAN Netmask

When entering static network parameters, you will notice that the cursor does not appear after the **LAN NETMASK** prompt and you cannot enter characters in the entry field. At first, the netmask “255.255.255.000” appears. Use the Up and Down arrows to scroll through valid netmasks. When the appropriate netmask value appears, press ENTER to confirm.

Possible netmask values are listed below. If you press the Down arrow, the values appear in this order: “255.255.255.000”, “255.255.254.000”, “255.255.252.000... If you press the Up arrow, the values appear in this order: “255.255.255.000”, “255.255.255.128”, “255.255.255.192”...

Scrolling netmask values in the Netmask field

Order (ascending)	Netmask value	Order (ascending)	Netmask value
1	255.255.255.000	16	255.128.000.000
2	255.255.254.000	17	255.000.000.000
3	255.255.252.000	18	254.000.000.000
4	255.255.248.000	19	252.000.000.000
5	255.255.240.000	20	248.000.000.000
6	255.255.224.000	21	255.000.000.000
7	255.255.192.000	22	224.000.000.000
3	255.255.128.000	23	192.000.000.000
9	255.255.000.000	24	128.000.000.000
10	255.254.000.000	25	255.255.255.252
11	255.252.000.000	26	255.255.255.248
12	255.248.000.000	27	255.255.255.240
13	255.240.000.000	28	255.255.255.224
14	255.224.000.000	29	255.255.255.192
15	255.192.000.000	30	255.255.255.128

Interface - Enable Static IP on LAN

(*) One option may be enabled: **ENABLE VLAN ON LAN** or **ENABLE DHCP ON LAN**. After one option is enabled, the other option disappears from the **SETUP NETWORK** menu.

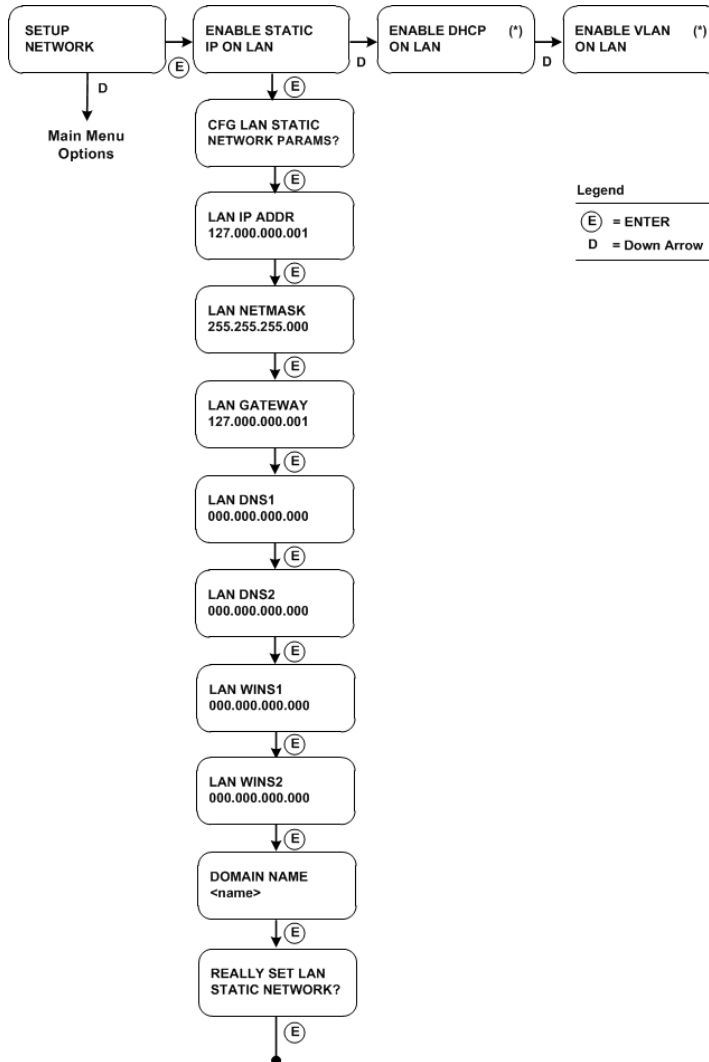

Figure 2-6. User Interface for Enable Static IP on LAN

We'll update menu options once you configure settings. Once you configure **ENABLE STATIC IP ON LAN** the option will change to **CHANGE STATIC IP ON LAN**. Once you configure **ENABLE DHCP ON LAN** the option will appear as **RENEW DHCP ON LAN**.

Configure IPv6 Address for Scanning

You have the option to configure the Scanner Appliance with an IPv6 address on the LAN interface - this will be used for scanning IPv6 hosts.

How it works - Once configured scanning traffic will be routed through the LAN interface - LAN IPv4 for scanning IPv4 hosts, and LAN IPv6 for scanning IPv6 hosts. All management traffic (software updates, health checks, etc) will be routed through the LAN IPv4 interface.

A few things to consider

- First go to the Appliance UI and complete the Quick Start. You must configure an IPv4 address on the LAN interface (using DHCP or a static IP).
- Be sure your Scanner Appliance has successfully connected to the Qualys Cloud Platform.
- The IPv6 Scanning feature must be enabled for your subscription.

Tell me the steps

- 1 Log in to the Qualys UI.
- 2 Go to Scans > Appliances and edit your Scanner Appliance. You'll see the Appliance wizard.
- 3 Under LAN settings select "Enable IPv6 for this scanner". You can choose "Automatically" and we'll do IP assignment through router advertisement, or choose "Static" and assign a static IP address.

Don't see these settings? This means IPv6 Scanning is not turned on for your account. Please contact Support or your Technical Account Manager if you'd like us to turn it on for you.

- 4 Be sure to save the Appliance settings.

Proxy Configuration

If the Scanner Appliance is behind a Proxy server, you need to enable a Proxy configuration using the **ENABLE PROXY** menu option. Authentication (Basic or NTLM) of the Scanner Appliance connection to your Proxy server can be enabled by configuring the Proxy user and password fields.

The Scanner Appliance uses Secure Sockets Layer (SSL) protocol (HTTPS) to secure its connection to the Qualys web application, in a similar way that a web browser does to a secure web server. If the Qualys connection must pass through a Proxy server, then you must enable the Proxy option on the Scanner Appliance. This configuration re-directs Qualys outbound connections through the Proxy server.

Your Proxy server must be configured to tunnel or pass through the SSL session to the Qualys web application. This ensures a secured end-to-end connection. SSL bridging or tunnel termination must not be configured in your Proxy server when supporting the Scanner Appliance.

Tell me the steps

To configure the Scanner Appliance with Proxy support, follow these steps:

- 1 Go to the **SETUP NETWORK** menu option.
- 2 Press the Down arrow until the **ENABLE PROXY** menu option appears. Then press ENTER to continue.
- 3 When the **CONFIG PROXY PARAMETERS** prompt appears, press ENTER to continue. Or press the Up arrow two times to quit this procedure and return to the **SETUP NETWORK** menu option.

Entering parameters

Enter Proxy parameters using the Up and Down arrows to scroll through characters.

- 1 When the **IP ADDRESS** prompt appears, enter the Proxy server's IP address. The gateway IP address appears in the screen by default. Use the Scanner Appliance interface to enter the Proxy server's IP address, and then press ENTER to continue.

Octets: The IP address entry is pre-filled with three digits for all octets, and you must enter a value for each digit. For example, to specify the IP address "176.34.20.5", you input the IP address as "176.034.020.005".

- 2 When the **PROXY PORT:** prompt appears, enter the port number assigned to the Proxy server. Port "0443" appears in the screen by default. Confirm that the port number shown is correct or enter a different one, if necessary. When the correct port number appears, press ENTER to continue.

- 3** When the **PROXY USER:** prompt appears, enter the user name for Proxy authentication. If authentication is not enabled at the Proxy level, leave the entry field blank. Press ENTER to continue.

Supported Characters: Lower case letters, upper case letters, numbers, and space. These special characters may be entered: underscore (_), hyphen (-), backslash (\), and period (.).

- 4** When the **PROXY PASSW** prompt appears, enter the password for Proxy authentication. If authentication is not enabled at the Proxy level, leave the entry field blank. Press ENTER to continue.

Supported Characters: Lower case letters, upper case letters, numbers, and space. Many special characters may be entered for the Proxy password.

- 5** When the **REALLY ENABLE PROXY?** prompt appears, press ENTER to continue. Or press the Up arrow two times to quit this procedure and return to the **SETUP NETWORK** menu option.
- 6** Review the confirmation messages. The **ENABLING PROXY SUPPORT** message appears followed by other messages while the Scanner Appliance attempts to make a connection to the Qualys Cloud Platform using the new configuration.

Upon success the **SCANNER APPLIANCE NAME-IP ADDRESS** message appears and the configured proxy is now confirmed working and being used.

Interface - Enable Proxy

The Scanner Appliance user interface to enable Proxy support is shown below.

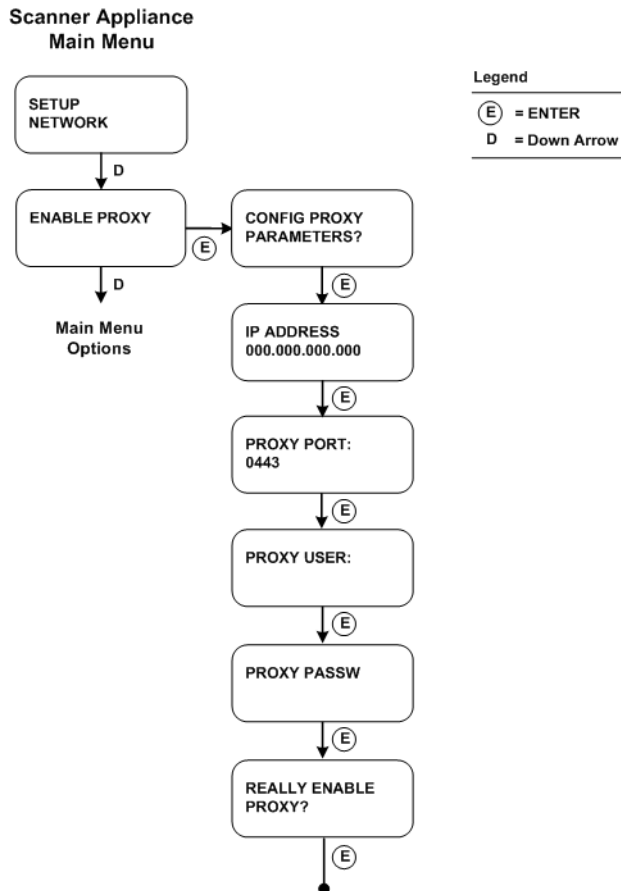

Figure 2-7. User Interface for Enable Proxy

Want to update proxy setting?

Once a Proxy configuration is enabled, the Proxy settings are stored on the Scanner Appliance. You can change or disable these settings at any time.

To change Proxy parameters, follow these steps:

- 1 Go to the **SETUP NETWORK** menu option.
- 2 Press the Down arrow until the **CHANGE PROXY PARAMS** menu option appears. Then press ENTER to continue.

- 3** Follow the prompts and messages in the Scanner Appliance interface to change the existing Proxy parameters. Existing parameters are displayed in each screen. Change and confirm each parameter. If a parameter has not changed, press ENTER to view the next parameter.
- 4** When the **REALLY ENABLE PROXY?** prompt appears, press ENTER to continue. Or press the Up arrow two times to quit this procedure and return to the **SETUP NETWORK** menu option.
- 5** Review the confirmation messages. The **ENABLING PROXY SUPPORT** message appears followed by others.

To disable Proxy parameters, follow these steps:

- 1** Go to the **SETUP NETWORK** menu option.
- 2** Press the Down arrow until the **DISABLE PROXY** menu option appears. Then press ENTER to continue.
- 3** When the **REALLY DISABLE PROXY?** prompt appears, press ENTER to continue. Or press the Up arrow two times to quit this procedure and return to the **SETUP NETWORK** menu option.
- 4** Review the confirmation messages.

Interface - Change Proxy Parameters

Figure 2-8. User Interface for Change Proxy Parameters

Confirm the configuration

When you see **SCANNER APPLIANCE NAME-IP ADDRESS** this means you are ready to start scanning. This message appears if the Scanner Appliance made a successful connection to the Qualys Cloud Platform using the new configuration.

The **USER LOGIN** prompt appears if the Scanner Appliance made a successful connection to the Qualys Cloud Platform, however the Appliance has not been activated. See Step 3 in the [Quick Start](#) and follow the instructions to activate the Scanner Appliance.

A network error screen appears if the Scanner Appliance failed to make a connection to the Qualys Cloud Platform. A network error may occur because the Proxy parameters you entered are incorrect, or they do not match the Proxy configuration on your network. See [Troubleshooting](#) for help with resolving this issue

Split Network Configuration

The Qualys Scanner Appliance provides two network traffic configurations: Standard and Split. The Standard configuration is enabled by default. You may enable the Split network configuration using menu options on the **SETUP NETWORK** menu.

In the Standard network configuration, the LAN RJ45 Ethernet connector services both scanning traffic and management traffic to the Qualys Cloud Platform over the Internet.

Figure 2-9. Standard network traffic configuration (default)

In the Split network configuration all Scanner Appliance management traffic, which includes scan/map job pickup, scan/map data upload, software updates and health checks are routed through the WAN port, whereas scan traffic uses the LAN port. This configuration enables the use of Scanner Appliances in networks that do not have direct Internet access.

Figure 2-10. Split network traffic configuration

No internal traffic is routed or bridged to the WAN port and no management traffic is routed or bridged to the LAN port.

The Scanner Appliance implements logical separation of scanning traffic and management traffic regardless of whether you configure the Standard or Split option.

A few things to consider

Please review these tips and best practices before you configure split network configuration.

- Check to be sure that network connection to both the LAN and WAN ports on the Scanner Appliance have been set up properly.
- The Scanner Appliance must be configured with DHCP or a static IP address on the LAN interface first.
- Using the LAN interface now? If your Scanner Appliance is powered on and connected to the LAN port only, power down the Scanner Appliance before you connect the second Ethernet cable to the WAN port.
- Do not configure the LAN and WAN interfaces on the same subnet. This type of configuration is not supported.

Enable DHCP on the WAN Interface

To configure the WAN interface with DHCP, follow these steps:

- 1 Select **SETUP NETWORK**, press the Down arrow until the **ENABLE WAN INTERFACE** menu option appears. Then press ENTER to continue.
- 2 Go to the **ENABLE DHCP ON WAN** menu option and press ENTER to continue.
- 3 When the **REALLY ENABLE DHCP ON WAN?** prompt appears, press ENTER to continue. Or press the Up arrow two times to quit this procedure and return to the **SETUP NETWORK** menu option.
- 4 Review the confirmation message. When the **SCANNER APPLIANCE NAME-IP ADDRESS** appears you are ready to start scanning. If another message appears you need to complete the [Quick Start](#) or resolve the network error indicated.

Enable Static IP on the WAN Interface

To configure the WAN interface with a static IP address, follow these steps:

- 1 Select **SETUP NETWORK**, press the Down arrow until the **ENABLE WAN INTERFACE** menu option appears. Then press ENTER to continue.
- 2 Go to the **ENABLE STATIC IP ON WAN** menu option and press ENTER to continue.
- 3 When the **CFG WAN STATIC NETWORK PARAMS?** prompt appears, press ENTER to continue. Or press the Up arrow to quit this procedure and return to the **SETUP NETWORK** menu option.

- 4** When the **WAN IP ADDR** prompt appears, enter the static IP address, and then press ENTER to continue.
- 5** When the **WAN NETMASK** prompt appears, use the Up and Down arrows to scroll to the desired netmask value. After selecting a netmask value, press ENTER to continue.
- 6** When the **WAN GATEWAY** prompt appears, enter the gateway IP address. Then press ENTER to continue.
- 7** When the **WAN DNS1** prompt appears, enter the IP address for the primary DNS. Then press ENTER to continue.
- 8** When the **WAN DNS2** prompt appears, enter the IP address for the secondary DNS. This entry is optional. Press ENTER to continue.
- 9** When the **REALLY SET WAN STATIC NETWORK?** prompt appears, press ENTER to continue. Or press the Up arrow to quit this procedure and return to the **SETUP NETWORK** menu option.
- 10** Review the confirmation message. When the **SCANNER APPLIANCE NAME-IP ADDRESS** message appears, you are ready to start scanning. If another message appears you need to complete the [Quick Start](#) or resolve the network error indicated.

Interface - Enable Static IP on WAN

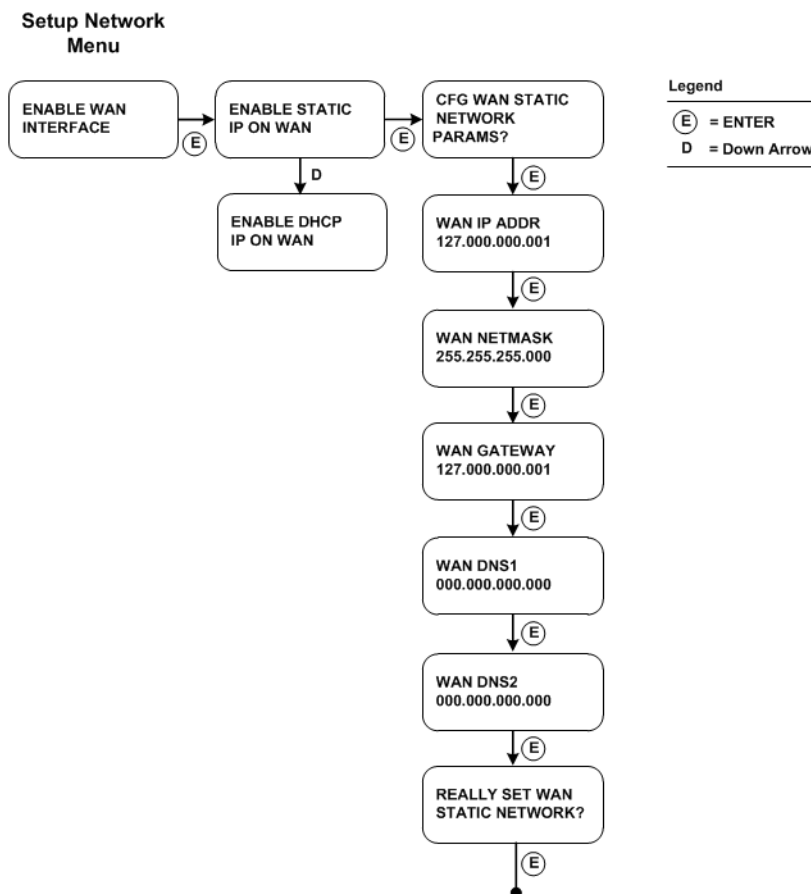

Figure 2-11. Enable Static IP Address on WAN Interface

We'll update menu options once you configure settings. Once you configure **ENABLE STATIC IP ON WAN** the option will change to **CHANGE STATIC IP ON WAN**. Once you configure **ENABLE DHCP ON WAN** the option will appear as **RENEW DHCP ON WAN**.

Ethernet Port Configuration

The Scanner Appliance uses Ethernet auto negotiation on scanning and management ports. Most network devices have auto negotiation enabled. Locked-down port policies with auto negotiation disabled, such as forcing speed, duplex, and link capabilities, are outdated. This is due to the maturity of the auto negotiation technology as well as the rate of adoption by product vendors and consumers over many years.

In the rare and unusual case where auto negotiation is disabled, Ethernet port configuration on the Scanner Appliance is necessary to ensure that link syncing occurs between the Scanner Appliance and its link partners. The Ethernet port links on the Appliance may be set to full-duplex 1GbaseT, 100baseT or 10baseT, or half-duplex 100baseT or 10baseT. The LAN and WAN port links (for split network configuration) may be set. The port link configuration on the Scanner Appliance must match the same configuration on the link partners. For example, if you have 100baseT full-duplex forced on devices, the same configuration must be enabled on the Appliance.

In the absence of auto negotiation, link syncing between link partners may not occur and the link may not come up. Consequently, the Scanner Appliance data transmission may be slow and there may be high packet loss, leading to unreliable scan results.

Tell me the steps

- 1 Select the **SETUP NETWORK** menu option
- 2 Press the Down arrow to advance through the menu options. When the **ETHERNET PORT SETTINGS** menu option appears, press ENTER.
- 3 The **LAN PORT LINK** option is displayed along with the LAN port link setting in effect. Press the Right arrow to advance through the available port link settings.

Tips - Use the Left arrow to advance through the settings in reverse order. To quit this procedure and return to **SETUP NETWORK**, press the Up arrow two times.

Setting	Description
AUTO	Auto negotiation
1GbaseT/Full	1GbaseT (1 gigabit) full-duplex data transmission
100baseT/Full	100baseT full-duplex data transmission
100baseT/Half	100baseT half-duplex data transmission
10baseT/Full	10baseT full-duplex data transmission
10baseT/Half	10baseT half-duplex data transmission

- 4 When the desired LAN port link setting is displayed, press ENTER to store the confirm the configuration setting.
- 5 When the **REALLY SET LAN TO <value>** prompt appears, press ENTER to store the configuration setting. Go to Step 9 unless WAN port configuration is necessary for split network configuration.

Split Network Configuration: When the Scanner Appliance has a split network configuration, you have the option to configure the WAN port link setting. To do this, follow the steps below.

- 6 Press the Down arrow one time. The **WAN PORT LINK** option is displayed along with the WAN port link setting in effect.
- 7 Press the Right arrow to advance through the available port link settings.

Tips - Use the Left arrow to advance through the settings in reverse order. To quit this procedure and return to **SETUP NETWORK**, press the Up arrow two times.

Setting	Description
AUTO	Auto negotiation
1GbaseT/Full	1GbaseT (1 gigabit) full-duplex data transmission
100baseT/Full	100baseT full-duplex data transmission
100baseT/Half	100baseT half-duplex data transmission
10baseT/Full	10baseT full-duplex data transmission
10baseT/Half	10baseT half-duplex data transmission

- 8 When the desired WAN port link setting is displayed, press ENTER to confirm the configuration setting.
- 9 When the **REALLY SET WAN TO <value>** prompt appears, press ENTER to store the configuration setting.
- 10 Return to **SETUP NETWORK**.

A change to an Ethernet port setting takes effect right away.

Reset the Network Configuration

You have the option to reset the network configuration to the factory default using the **RESET NETWORK CONFIG** menu option on the Scanner Appliance user interface. For example, you may wish to reset the network configuration for troubleshooting purposes when setting up the Scanner Appliance. This is useful if you need to quickly set up the Scanner Appliance in a different location.

Important! When you reset the network configuration the service resets the network settings to the factory default. Any existing network settings that were customized by the user are removed. These include settings entered using the Scanner Appliance interface such as static IP address, Proxy support, the WAN interface configuration, Ethernet port configuration, and user/password store. After the reset, you must manually re-enter any required network configuration settings using the Scanner Appliance interface and ensure that the Scanner Appliance can connect to the Qualys Cloud Platform. Without proper configuration, the Scanner Appliance cannot perform scans.

To reset the network configuration, follow these steps:

- 1 Go to the **SETUP NETWORK** menu option and press ENTER.
- 2 Press the Down arrow to advance through the menu options. When the **RESET NETWORK CONFIG** menu option appears, press ENTER.
- 3 When the **REALLY RESET NETWORK CONFIG?** prompt appears, press ENTER to continue. Or press the Up arrow to quit this procedure and return to the **SETUP NETWORK** menu.
- 4 Review the confirmation messages.

The Scanner Appliance attempts to connect to the Qualys Cloud Platform using the default network configuration (DHCP enabled, no VLAN configuration, no Proxy configuration, no split network configuration, and Ethernet auto negotiation enabled).

In a case where the Scanner Appliance network configuration was customized (not identical to the default configuration provided by Qualys) before the reset, further network configuration is necessary in order for the Scanner Appliance to connect to the Qualys Cloud Platform and perform scans. Need help? See the [Quick Start](#).

Changing the Network Configuration

When the Scanner Appliance has successfully connected to the network, the Appliance stores the network configuration settings. These settings will appear as default parameters in the Scanner Appliance user interface. You can make updates to the network configuration at any time using the Scanner Appliance interface.

For example, to change from DHCP on the LAN interface to a static IP address on the LAN interface, go to the **SETUP NETWORK** menu option and then press ENTER. Press the Down arrow until the **ENABLE STATIC IP ON LAN** menu option appears. Follow the prompts and enter the static IP configuration.

Some network configuration settings have confirmation prompts. Be sure to confirm new configuration settings at these prompts. For example, if you are updating from DHCP on the LAN interface to a static IP on the LAN interface, enter the appropriate configuration settings following the prompts. At the **REALLY SET LAN STATIC NETWORK?** prompt, press ENTER to confirm the change.

Want to reset the network configuration to the factory default? See [Reset the Network Configuration](#).

When a scan is in progress at the time of the configuration change, the scan task is cancelled and the message **CANCELING THE ONGOING SCAN** appears in the Scanner Appliance interface. This message is a reminder that a scan in progress will not complete, although partial scan results may be available. To avoid this situation check the “scan in progress” indicator (S1 LED) on the front panel prior to making changes to network settings.

A network error message indicates that the Scanner Appliance was not able to make a connection to the Qualys platform using the new network configuration. See [Troubleshooting](#) for help with resolving the issue.

Troubleshooting

This appendix describes troubleshooting techniques you can use to respond to errors and performance conditions when using the Scanner Appliance.

[Troubleshooting guidelines](#)

[How can I test network connectivity?](#)

[Tell me about Network Errors](#)

[Communication Failure message](#)

Troubleshooting guidelines

If your Scanner Appliance reports a network error there's an issue with the connectivity from Scanner Appliance to the Qualys Cloud Platform. We recommend you follow these steps to troubleshoot the issue:

- 1 Lookup the meaning of the network error. See [Tell me about Network Errors](#).
- 2 Be sure to enable all necessary configurations on the Appliance. This network error message may appear because configurations are incomplete, incorrect, or are missing.
- 3 Follow the guidelines in [How can I test network connectivity?](#).
- 4 Review the potential problems and related solutions in [Tell me about Network Errors](#).

In many cases, a network error message indicates that additional configuration of the Scanner Appliance is required. For example, if your network does not have DHCP, you need to assign a static IP configuration. Configuration for Proxy support and/or split network configuration may be required.

See the network configurations below that include detailed set up steps for each.

Network Configurations with DHCP Present

Network configuration	Appliance set up steps
DHCP present No Proxy Standard network traffic	Plug in the Appliance
DHCP present Proxy server Standard network traffic	Plug in the Appliance Enable Proxy (page 37)
DHCP present Split network traffic	Plug in the Appliance Enable DHCP on WAN (page 43)
DHCP present Proxy server Standard network traffic	Plug in the Appliance Enable Proxy (page 37) Enable DHCP on LAN

Network Configurations without DHCP Present

Network configuration	Appliance set up steps
DHCP not present No Proxy Standard network traffic	Plug in the Appliance Enable Static IP on LAN (page 32)
DHCP not present Proxy server Standard network traffic	Plug in the Appliance Enable Static IP on LAN (page 32) Enable Proxy (page 37)
DHCP not present Split network traffic	Plug in the Appliance Enable Static IP on LAN (page 32) Enable Static IP on WAN (page 43)
DHCP not present Proxy server Standard network traffic	Plug in the Appliance Enable Static IP on LAN (page 32) Enable Proxy (page 37) Enable Static IP on WAN (page 43)

Additional network configurations are supported, including a static IP address on LAN and DHCP on WAN, as well as DHCP on LAN and a static IP address on WAN.

How can I test network connectivity?

Use a Laptop. It is recommended that you test network connectivity to the Qualys Cloud Platform using your laptop (or other device):

- 1 Take the laptop to the location where the Scanner Appliance will be installed and connect the laptop to the network, using the same network cable and port that will be used for the Appliance.
- 2 Configure the laptop with the same network configuration that the Scanner Appliance will use (IP address, gateway, DNS server, etc.).
- 3 If the connection to the Qualys Cloud Platform must pass through a proxy server, configure the laptop's web browser with proxy information.
- 4 Open a browser and try to log into your Qualys account. You'll see the Qualys **Log In** page after a successful connection is made to the Qualys Cloud Platform.

Test DNS Name Resolution. You can test DNS name resolution from any machine connected to the same network as your Scanner Appliance. If DNS name resolution is working properly, server information is returned including the server name and IP address. (Note that "nslookup" is not available on all systems.)

Tell me about Network Errors

A network error is reported when the Scanner Appliance attempted to connect to the Qualys Cloud Platform and it failed. You'll see an error code with a description to help you with troubleshooting.

A network error appears in 2 lines within the Appliance user interface. The first line gives an error code, and the second line gives a description, a reason for the error. Sample:

Error codes

You'll see an error code in the 1ST line of the **NETWORK ERR** screen.

Error Code	Means
01	Using its current network settings the Scanner Appliance attempted to make a connection to the Qualys Cloud Platform and it failed. Please review the error description that follows for the reason why.
03	A user enabled proxy settings and this was saved with the Appliance's network settings. Then the Appliance attempted to make a connection to the Qualys Cloud Platform using the saved network settings, and it failed. Please review the error description that follows for the reason why.
04	A user disabled proxy settings and this was saved with the Appliance's network settings. Then the Appliance attempted to make a connection to the Qualys Cloud Platform using the saved network settings, and it failed. Please review the error description that follows for the reason why.
06	Using its boot time network configuration the Scanner Appliance attempted to make a connection to the Qualys Cloud Platform and it failed. Please review the error description that follows for the reason why.
07	A user configured an invalid static LAN IP address or gateway IP address and this was saved with the Appliance's network settings. Please review the error description that follows for the reason why.

Error Code	Means
08	A user configured an invalid static WAN IP address or gateway IP address and this was saved with the Appliance's network settings. Please review the error description that follows for the reason why.
09	A user configured DHCP or a static IP address and this was saved with the network settings. Then the Appliance tried to connect and a DNS lookup of the Qualys Cloud Platform URL failed. Please review the error description that follows for further detail.
10	A user configured the LAN interface and this was saved with the network settings. Then the Appliance attempted to make a connection to the Qualys Cloud Platform using the saved network settings, and it failed. Please review the error description that follows for the reason why.
12	A user configured the WAN interface and this was saved with the network settings. Then the Appliance attempted to make a connection to the Qualys Cloud Platform using the saved network settings, and it failed. Please review the error description that follows for the reason why.
13	A user configured VLANs and this was saved with the Appliance's network settings. Then the Appliance attempted to make a connection to the Qualys Cloud Platform using the saved network settings, and it failed. Please review the error description that follows for the reason why.
14	A user pressed ENTER on the ACTIVATION screen. Then the Appliance tried to connect and a DNS lookup of the Qualys Cloud Platform URL failed. Please review the error description that follows for the reason why.

Error descriptions

You'll see an error description in the 2nd line of the **NETWORK ERR** screen.

LAN/WAN errors

LAN iface down	LAN interface is down
WAN iface down	WAN interface is down
LAN no CARRIER	No CARRIER on LAN interface
WAN no CARRIER	No CARRIER on WAN interface
LAN no IPv4	LAN has no IPv4 address
WAN no IPv4	WAN has no IPv4 address

LAN/WAN errors

LAN no DNS srv	LAN has no DNS servers
WAN no DNS srv	WAN has no DNS servers
LAN DNS failed	LAN DNS servers can't resolve Qualys Cloud PlatformURL
WAN DNS failed	WAN DNS servers can't resolve Qualys Cloud PlatformURL
no LAN IPv4 GW	LAN has no default IPv4 gateway
no WAN IPv4 GW	WAN has no default IPv4 gateway
inv LAN IP cnf	Invalid LAN IP configuration
inv WAN IP cnf	Invalid WAN IP configuration

Proxy errors

prxy con tmout	Proxy initial connect() timeout
prxy con close	Proxy closed connection
prxy no HTTP/1	Proxy response has no HTTP/1 string
prxy noauthsup	No proxy AUTH methods supported
prxy HTTP/<code>	Invalid proxy HTTP code (like 407, 404 etc)

Qualys connection errors

QG con timeout	Qualys Cloud Platform - initial connect() timeout
QG SSL handshk	Qualys Cloud Platform - SSL handshake failed
QG SSL certval	Qualys Cloud Platform - SSL certificate validation failed

Communication Failure message

You'll see a **COMMUNICATION FAILURE** message if there is a network communications breakdown between the Scanner Appliance and the Qualys Cloud Platform.

Why does it happen?

The communication failure may be due to one of these reasons: the network cable was unplugged from the Scanner Appliance, the local network goes down, or any of the network devices between the Scanner Appliance and the Qualys Cloud Platform goes down.

When does the message appear?

If there are no scans running on the Appliance - The next time the Appliance sends a polling request to the Qualys Cloud Platform, the polling request fails, and then the **COMMUNICATION FAILURE** message appears.

If there are scans running on the Appliance - The **COMMUNICATION FAILURE** message appears after the running scans time out. Usually the S1 LED turns off after the scans time out. If this message appears, it is recommended that you use the Qualys user interface to cancel any running scans and restart them to ensure that results are accurate.

How do I know the issue is resolved?

After the root cause is resolved, you'll see the **COMMUNICATION FAILURE** message until the next time the Appliance makes a successful polling request to the Qualys Cloud Platform. Then you'll see the Appliance's IP address - friendly name and you can start scanning using your Appliance.

Note - The **COMMUNICATION FAILURE** message may not disappear right away. There may be a lag time after the network is restored and before the Appliance is back online, depending on when the next polling request is scheduled. Additional time is necessary for communications to be processed by a Proxy server if the Appliance has a Proxy configuration.

APPENDIX A

Product Specifications

Configuration	
CPU	Intel Xeon® Quad-Core 3.5GHz, 8M Cache
Memory	16GB DDR3-1600
Hard Drive	1TB, 2.5", SATA 6Gb/s, 5400RPM
Ethernet	Two GbE ports
USB	Four USB 2.0 ports
Power Input	100-240 VAC, 50-60Hz, 4A Single phase
Power Consumption	Max: 91W (310 BTU/hr); Typical: 80W (273 BTU/hr)
Dimension	1.75 (H) x 17 (W) x 14 (D) inches
Weight	12.65 lbs.
Environment	
Acoustic Noise	~45 dBA acoustic noise level at 23°C
Operating Conditions	0°C to 35°C, from 0 to 5,000 feet; 20% to 90% RH
Storage Conditions	-10°C to 70°C; 10% to 85% R.H. (non-condensing)
Operating Vibration	.3 Grms, 10 to 500 Hz, 5 minutes per axis
In-Package Shock	In accordance with ISTA 2A
Regulatory	ETL (conforms to UL STD 60950-1, CSA STD C22.2 No. 60950-1), CE
EMC	FCC Part 15 Class A (conforms to EN 55022/24, EN 61000, CISPR 22)
Environmental	RoHS
Other certifications	Per specific requirements

Copyright (C) 1995-1998 Eric Young (eay@cryptsoft.com). All rights reserved.

This package is an SSL implementation written by Eric Young (eay@cryptsoft.com). The implementation was written so as to conform with Netscapes SSL. This library is free for commercial and non-commercial use as long as the following conditions are aheared to. The following conditions apply to all code found in this distribution, be it the RC4, RSA, lhash, DES, etc., code; not just the SSL code. The SSL documentation included with this distribution is covered by the same copyright terms except that the holder is Tim Hudson (tjh@cryptsoft.com).

Copyright remains Eric Young's, and as such any Copyright notices in the code are not to be removed. If this package is used in a product, Eric Young should be given attribution as the author of the parts of the library used. This can be in the form of a textual message at program startup or in documentation (online or textual) provided with the package.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the copyright notice, this list of conditions and the following disclaimer.
2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.
3. All advertising materials mentioning features or use of this software must display the following acknowledgement:

"This product includes cryptographic software written by Eric Young (eay@cryptsoft.com)"

The word 'cryptographic' can be left out if the rouines from the library being used are not cryptographic related :-).

4. If you include any Windows specific code (or a derivative thereof) from the apps directory (application code) you must include an acknowledgement:

"This product includes software written by Tim Hudson (tjh@cryptsoft.com)"

THIS SOFTWARE IS PROVIDED BY ERIC YOUNG "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE AUTHOR OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

The licence and distribution terms for any publically available version or derivative of this code cannot be changed. i.e. this code cannot simply be copied and put under another distribution licence [including the GNU Public Licence.]

Independent implementation of MD5 (RFC 1321).

This code implements the MD5 Algorithm defined in RFC 1321. It is derived directly from the text of the RFC and not from the reference implementation.

The original and principal author of md5.c is L. Peter Deutsch <ghost@aladdin.com>. Other authors are noted in the change history that follows (in reverse chronological order):

1999-11-04 lpd Edited comments slightly for automatic TOC extraction.

1999-10-18 lpd Fixed typo in header comment (ansi2knr rather than md5).

1999-05-03 lpd Original version.

Project Athena, Athena, Athena MUSE, Discuss, Hesiod, Kerberos, Moira, and Zephyr are trademarks of the Massachusetts Institute of Technology (MIT). No commercial use of these trademarks may be made without prior written permission of MIT.

"Commercial use" means use of a name in a product or other for-profit manner. It does NOT prevent a commercial firm from referring to the MIT trademarks in order to convey information (although in doing so, recognition of their trademark status should be given).

Copyright, OpenVision Technologies, Inc., 1996, All Rights Reserved

WARNING: Retrieving the OpenVision Kerberos Administration system source code, as described below, indicates your acceptance of the following terms. If you do not agree to the following terms, do not retrieve the OpenVision Kerberos administration system.

You may freely use and distribute the Source Code and Object Code compiled from it, with or without modification, but this Source Code is provided to you "AS IS" EXCLUSIVE OF ANY WARRANTY, INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OR ANY OTHER WARRANTY, WHETHER EXPRESS OR IMPLIED. IN NO EVENT WILL OPENVISION HAVE ANY LIABILITY FOR ANY LOST PROFITS, LOSS OF DATA OR COSTS OF PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, OR FOR ANY SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES ARISING OUT OF THIS AGREEMENT, INCLUDING, WITHOUT LIMITATION, THOSE RESULTING FROM THE USE OF THE SOURCE CODE, OR THE FAILURE OF THE SOURCE CODE TO PERFORM, OR FOR ANY OTHER REASON.

OpenVision retains all copyrights in the donated Source Code. OpenVision also retains copyright to derivative works of the Source Code, whether created by OpenVision or by a third party. The OpenVision copyright notice must be preserved if derivative works are made based on the donated Source Code.

OpenVision Technologies, Inc. has donated this Kerberos Administration system to MIT for inclusion in the standard Kerberos 5 distribution. This donation underscores our commitment to continuing Kerberos technology development and our gratitude for the valuable work which has been performed by MIT and the Kerberos community.

Portions contributed by Matt Crawford <crawdad@fnal.gov> were work performed at Fermi National Accelerator Laboratory, which is operated by Universities Research Association, Inc., under contract DE-AC02-76CHO3000 with the U.S. Department of Energy.

=====

The Metasploit Framework is provided under the 3-clause BSD license above.

The copyright on this package is held by Rapid7 LLC.

This license does not apply to the following components:

- The OpenSSL library embedded into the Meterpreter payload binaries and the corresponding header files in the source tree
- The Packet Sniffer SDK (MicroOLAP) library embedded into the Meterpreter Sniffer extension. HD Moore has a single-seat developer license.
- The modified TightVNC binaries and their associated source code.
- The icons used by msfweb that were not created by Metasploit
- The Bit-Struct library located under lib/bit-struct
- The Byakugan plugin located under external/source/byakugan
- The Metasm library located under lib/metasm
- The PcapRub library located under external/pcaprub
- The Rabal library located under lib/rabal
- The Racket library located under lib/racket

- The Ruby-Lorcon library located under external/ruby-lorcon
- The SNMP library located under lib/snmp
- The Zip library located under lib/zip

The latest version of this software is available from <http://metasploit.com/>

GNU LESSER GENERAL PUBLIC LICENSE

Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.

59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

GNU LESSER GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) The modified work must itself be a software library.
- b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
- c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
- d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a “work that uses the Library”. Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a “work that uses the Library” with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a “work that uses the library”. The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a “work that uses the Library” uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a “work that uses the Library” with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable “work that uses the Library”, as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the “work that uses the Library” must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Linking with OpenSSL

17. In addition, as a special exception, we give permission to link the code of its release of libssh with the OpenSSL project's "OpenSSL" library (or with modified versions of it that use the same license as the "OpenSSL" library), and distribute the linked executables. You must obey the GNU Lesser General Public License in all respects for all of the code used other than "OpenSSL". If you modify this file, you may extend this exception to your version of the file, but you are not obligated to do so. If you do not wish to do so, delete this exception statement from your version.

END OF TERMS AND CONDITIONS

Safety Notices

Elevated Operating Ambient — The ambient temperature of an operating rack environment will be greater than the room's ambient temperature. The unit must be installed in a rack where its operating ambient temperature does not exceed the unit's maximum ambient temperature.

Reduced Air Flow — The unit must be installed in a rack which enables adequate air flow for the proper cooling of the unit.

Adequate Power — The rack must be set up to ensure that an appropriate level and amount of power is available to the unit. The overall connection of the rack equipment to the supply circuit and the effect that overloading the supply circuit might have on overcurrent protection and supply wiring should also be considered.

Reliable Grounding — Reliable grounding of rack equipment must be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (for example, use of power strips).

Mechanical Loading — The unit should be installed in a rack in a manner that does not create a hazardous condition due to uneven mechanical overloading.

Cautionary Notices

The socket-outlet shall be installed near the equipment and shall be easily accessible.

Le socle de prise de courant doit être installé à proximité du matériel et doit être aisément accessible.

CAUTION: RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

ATTENTION: IL Y A RISQUE D'EXPLOSION SI LA BATTERIE EST REMPLACÉE PAR UNE BATTERIE DE TYPE INCORRECT. METTRE AU REBUT LES BATTERIES USAGÉES CONFORMÉMENT AUX INSTRUCTIONS.
